Menara Perkebunan Volume 90, No. 1, 2022

Hasil Penelitian (<i>Research Reports</i>)	Halaman
Potensi <i>electronic nose</i> 118 untuk mendeteksi penyakit busuk pangkal batang pada kelapa sawit <i>(The potency of electronic nose 118 for detection of basal stem rot in oil palm)</i> - Agustin Sri Mulyatni, Irma Kesnawaty, Deden Dewantara Eris, Tri Panji, Wita Kimberly, Happy Widiastuti, Priyono, Chotimah & Kuwat Triyana.....	1-10
Uji <i>molecular docking</i> dan bioinformatika terhadap meniran (<i>Phyllanthus niruri</i> L.) sebagai antivirus SARS-CoV-2 dan antikanker serviks <i>(Molecular docking and bioinformatics on meniran (Phyllanthus niruri L.) as SARS-CoV-2 antiviral and cervical anticancer)</i> - Nuha Haifa Arifin & Rifki Febriansah	11-22
Aplikasi metabolit sekunder dari tiga isolat <i>Pseudomonas fluorescens</i> untuk mengendalikan penyakit antraknosa pada daun kakao <i>(Application of secondary metabolites from three isolates of Pseudomonas fluorescens to control anthracnose on cocoa leaves)</i> - Fitrianti, Loekas Soesanto, Endang Mugiastuti, Murti Wisnu Ragil Sastyawan & Abdul Manan.....	23-31
Pengaruh kombinasi kitosan soluble liquid dan pestisida sintetik terhadap pertumbuhan dan hasil panen cabai keriting di Nganjuk <i>(Effect of combination of soluble liquid chitosan and synthetic pesticide on plant growth and yield of curly chili in Nganjuk)</i> - Ciptadi Achmad Yusup, Sri Wahyuni, Deden Dewantara Eris, Priyono & Siswanto.....	32-39
The in silico study of the COBRA gene family in sugarcane related to potential biomass content <i>(Kajian in silico dari famili gen COBRA pada tanaman tebu yang terkait dengan potensi kandungan biomassa)</i> - Riza Arief Putranto, Galuh Wening Permatasari & Rizka Tamania Saptari.....	40-50
Techno-economic evaluation of integrated levulinic acid, formic acid, and furfural plant from oil palm empty fruit bunch with pre-treatment variations <i>(Evaluasi teknoekonomi pabrik asam levulinat, asam format, dan furfural terpadu dari tandan kosong kelapa sawit dengan variasi perlakuan awal)</i> - Denia Apriliani Rahman, Andre Fahriz Perdana Harahap & Misri Gozan.....	51-60
Keragaan vegetatif dan generatif pada fase pembungaan awal kelapa Genjah kopyor asal kultur embrio di Bogor, Jawa Barat <i>(Vegetative and generative performances in the early flowering phase of kopyor Dwarf coconuts from embryo culture in Bogor, West Java)</i> - M. Eko Riyo Bayu Prasetyo, Imron Riyadi & Sumaryono	61-70
Application of silica solubilizing bacteria to improve the water use efficiency of maize <i>(Aplikasi bakteri pelarut silika untuk memperbaiki efisiensi penggunaan air pada tanaman jagung)</i> - Indah Puspita Sari, Yulin Lestari, Hamim & Laksmi Prima Santi.....	71-80

Hasil Penelitian (<i>Research Reports</i>)	Halaman
Sintesis, karakterisasi, dan pengujian aktivitas antifungi nanopartikel perak – <i>cysteine</i> secara <i>in vitro</i> terhadap <i>Ganoderma boninense</i> <i>(Synthesis, characterization, and in vitro antifungal activity assay of cysteine-silver nanoparticles against Ganoderma boninense)</i> - Yora Faramitha, Firda Dimawarnita, Haryo Tejo Prakoso & Siswanto.....	81-89
Aplikasi kitosan untuk penekanan kejadian penyakit dan peningkatan hasil panen tanaman padi (<i>Oryza sativa</i> L.) <i>(Application of chitosan to suppress diseases and enhance rice (Oryza sativa L.) yield)</i> - Sri Wahyuni, Ciptadi Ahmad Yusup, Agustin Sri Mulyatni, Deden Dewantara Eris, Priyono & Siswanto.....	90-97
Determination of the optimum initial callus weight for the efficient propagation of sugarcane in temporary immersion bioreactor <i>(Penentuan bobot awal kalus yang optimum untuk propagasi tanaman tebu)</i> - Rizka Tamania Saptari, Imron Riyadi, Masna Maya Sinta, M Eko Riyo Bayu Prasetyo, Sylvia Lindawati & Sumaryono.....	98-108
Produksi dan uji aktivitas enzim <i>fatty acid photodecarboxylase</i> dari <i>Chlorella variabilis</i> melalui kultivasi pada medium CYT dan KW21 <i>(Production and enzyme activity assay of fatty acid photodecarboxylase from Chlorella variabilis through cultivation in CYT and KW21 media)</i> - Yora Faramitha, Sheren Prajna Paramita, Fauziatul Fitriyah, Djoko Santoso & Irma Kresnawaty.....	109-118
Aplikasi Fungi Mikoriza Arbuskula (FMA) pada pembibitan untuk menekan kejadian penyakit busuk pangkal batang kelapa sawit <i>(Application of Arbuscular Mycorrhizal Fungi (AMF) at the nursery to suppress the basal stem rot disease incidence in oil palm)</i> - Henny Hendarjanti & Henik Sukorini.....	119-133
Pengujian aktivitas antifungi kitosan, nanokitosan, dan nanokitosan-Cu secara <i>in vitro</i> terhadap <i>Colletotrichum gloeosporioides</i> pada buah mangga (<i>Mangifera indica</i>) <i>(In vitro antifungal activity assay of chitosan, nanochitosan, and nanochitosan-Cu against Colletotrichum gloeosporioides in mango (Mangifera indica))</i> - Sri Wahyuni, Muhammad Abdul Aziz, Sentiawati, Deden Dewantara Eris, Maria Bintang Priyono & Siswanto.....	134-144
Peningkatan hasil panen jagung (<i>Zea mays</i> L.) menggunakan asam humat yang diperkaya produk-samping pabrik urea dan NPK <i>(Increasing the yield of maize (Zea mays L.) using humic acid enriched by-product Urea and NPK factory)</i> - Muhammad Abdul Aziz, Sri Wahyuni, Hana Fadila, Valdi Muhamad Rafiansyah Siregar, Fauziatul Fitriyah, Sulastri, Insyiah Meida Luktyansyah, Priyono & Siswanto.....	145-159
Isolation and selection of siderophore-producing bacteria from roots of Simadu pineapple (<i>Ananas comosus</i>) in Subang District, West Java <i>(Isolasi dan seleksi bakteri penghasil siderofor dari akar nanas (Ananas comosus) Simadu di Kabupaten Subang, Jawa Barat)</i> - Hanifah Fuadi, Prayoga Suryadarma, Khaswar Syamsu, Surono, Nurika Asih Setiyani, Selvia Mahilda Ridhoha, Aninda Sekar Zahra, Nadia Stepani & Muhammad Rasyid Ramadhan....	160-167

Author Guidelines E-Journal Menara Perkebunan

Manuscripts. Manuscript for Menara Perkebunan publication can be an original research result, technology development, reviews on biotechnology and bioindustry and their applications in agriculture, health and environment as well as other aspects of biotechnology. The manuscript can be written in Indonesian and English, accompanied by abstracts in the two languages. In general, the manuscript is written down in A4 page size, using Times New Roman with 12pt, 1.5 spaces (except abstract 1 space), and each page is numbered on the bottom right.

Title of Manuscript. The title must be concise, factual and informative which accurately reflects the content of the text and not more than fifteen (15) words. If manuscript is written in Indonesia, the main title is in Indonesian (Times New Roman, 14pt, no capital, bold, 1.5 space), followed by the English title under the main title (Times New Roman, 12pt, no capital, italic, 1.5 space), vice versa. Author's name, institution information (name, address, city, and postal code), and e-mail of the corresponding author(s) are put below the title (Times New Roman, 12pt).

The example of manuscript title:

Karakteristik antibodi anti *Ganoderma* sp. yang dihasilkan dari jenis dan sumber antigen yang berbeda

*Characteristics of antibodies against *Ganoderma* sp. produced from different types and sources of antigens*

Irma KRESNAWATY ^{1*)}, Kholis A. AUDAH ²⁾, Hasim MUNAWAR ³⁾ & Happy WIDIASTUTI ¹⁾

¹⁾ Pusat Penelitian Bioteknologi dan Bioindustri Indonesia, Jl. Taman Kencana No.1, Bogor 16128, Indonesia
²⁾ Universitas Swiss Jerman, The Prominence Tower, Jl. Jalur Sutera Barat Kav. 15, Alam Sutera, Panunggangan Tim., Pinang, Tangerang 15143, Indonesia
³⁾ Balai Besar Veteriner, Jl. R.E Martadinata No.30, Bogor 16114, Indonesia

Abstract. Consists of Indonesian and English abstracts. The number of words is not more than 250, containing the essence of all writing which includes the objectives, materials and methods, results and conclusions (Times New Roman, 12pt, 1 space). If manuscript is written in Indonesia, write the abstract first in English, vice versa.

Keywords. A minimum of three to five key words consisting of one word or a combination of words that indicate the main subjects in the script, and have not been mentioned in the title. Key words are arranged in alphabetical order according to the language used in manuscript. (Times New Roman, 12pt)

Introduction. The introduction contains the background and the objective(s) of your research. In this section, explain the research problem(s) supported by some literature, briefly mention how previous relevant studies have done to address the problem(s), and clearly state the aim(s) of your study. (Times New Roman, 12pt, 1.5 spaces)

Materials and Methods. Consists of materials and methods used in this research. Time and place of the research should be mentioned only for the research done in field. (Times New Roman, 12pt, 1.5 spaces, and title of sub-chapters are written in italic)

Results and Discussion. Provide the main results, supporting results, and discussion of each sub-chapter. Some previous relevant studies need to be cited to support the research results. (Times New Roman, 12pt,

1.5 spaces, and title of sub-chapters are written in italic)

Conclusion. Contains the conclusions of the results of the study, answering the objectives of the study (Times New Roman, 12pt, 1.5 spaces)

Scientific name. For the first time writing, the scientific name is written in full including the name of the inventor. After that it can be shortened to the initial letter. If using a name in Indonesian or regional, for the first time it must be accompanied by a scientific name.

Abbreviation. Abbreviations should be defined at first mention and used consistently thereafter. Long chemical terms are abbreviated in accordance with applicable regulations, for example DNA, RNA, ATP etc. Date cannot be abbreviated. Units of measure are written in full unless, if preceded by a number such as g, mg, mL. Numbers in the text from zero to ten are written with letters, except those followed by units of measure written in Arabic numbers, for example 3 tons, 7 mL, fractional numbers are written in decimal places. Write the unit $\text{mg}\cdot\text{L}^{-1}$. Numbers with decimal fractions use comma (,) for Indonesian script and period (.) for English script. Number that represents thousands use period (.) for Indonesian script and comma (,) for English script.

Acknowledgments. All acknowledgments, including people, grants, funds, and potential conflicts of interest should be included. The names of funding organizations should be written in full. (Times New Roman, 12pt, 1.5 spaces)

References. References should be arranged alphabetically using **CBE Council of Biology Editors 1994** style. The literature used as reference should be actual library sources including journals, patents, theses, proceedings, and textbooks. Unpublished data should not be cited as literature. Literature used as a reference should be at least 80% of recent literature (published in the last 10 years) and maximum 20% of old journals and books. Some examples of references writing in CBE Council of Biology Editors 1994 style are provided below:
